Perfume & Scents

Scents are a very important aspect of the overall experience of using everyday products. They can create a range of sensations such as enhancing mood, invigorating, or calming us. A preference for a certain fragrance reveals something about an individual's identity. This is what comes into play when designing perfumes. The right scent can put you at ease or make you feel confident. Whether you choose a product with a noticeable freshness or a light background note, fragrance is often part of making your routine pleasant and enjoyable. We offer a range of products and scents that cater to different tastes, including several perfume-free variants to meet the needs of those consumers who prefer a scent free product.

Our perfumes are formulated with the greatest care and utmost attention to safety. Whenever a perfume is developed or enhanced, our safety scientists evaluate the detailed composition of the perfume to ensure that the product is safe to use. Perfumes are formulated taking into account our stringent internal safety standards for every ingredient, as well as the safety standards set by the International Fragrance Association (IFRA). We adhere to the IFRA Code of Practice and the IFRA Standards. For more information about IFRA go to www.ifraorg.org.

The list below represents all the ingredients our perfumers select from to create consumer appealing scents, in alphabetical order. This list is regularly updated to reflect changes in the palette of ingredients.
